

AYHECA LOUISE C. DE JESUS

Bulacan, Philippines | +69453679945 | ayhecalouisedejesus@gmail.com | louisecalix.github.io | linkedin.com/in/ayheca-louise

PROFESSIONAL SUMMARY

Aspiring developer with experience in relational databases, RESTful APIs, and scalable application features using Node.js, Express.js, and MySQL. Built solutions for academic, social media, and e-commerce projects, improving data flow, workflows, and system reliability through testing. Also developed an AI-powered gesture recognition desktop app using a custom YOLO model.

TECHNICAL SKILLS

Programming Languages: JavaScript (Node.js), Python, SQL, HTML, CSS

Frameworks: Express.js, Tauri (Rust-based desktop)

Databases: MySQL, SQLite, PostgreSQL, MongoDB

APIs & Tools: REST API design, Postman, Git, GitHub, Docker, VirtualBox, VMware Workstation, Go High Level

ML / AI Tools: Roboflow, YOLO (object detection), Google Colab, Codex, Claude, Cursor

WORK EXPERIENCE

Web Developer Intern at 8Con Academy

April – June 2025

- Built a normalized MySQL database for EASTS, improving data organization and integrity for enrollment and student records.
- Developed and tested REST APIs (Node.js, Express) for student and course data, ensuring reliable CRUD operations via Postman.
- Created a Sales Funnel prototype to visualize system flow, improving stakeholder understanding and validation.
- Automated workflows and managed CRM campaigns using Go High Level, streamlining lead handling and communication processes.

PROJECTS

Handigo – Hand Gesture Recognition System | [Link](#)

Technologies used: Roboflow, Google Colab, Python, Tauri, Rust

- Built and trained a custom YOLO-based gesture classification model by preparing and annotating a gesture dataset in Roboflow and running training/evaluation cycles in Google Colab.
- Integrated the ML inference pipeline into a cross-platform Tauri desktop application, designing the onboarding flow and managing model-to-UI data binding for real-time gesture output.

The Wall – Social Media API | [Link](#)

Technologies used: Node.js, Express.js, MySQL

- Developed a RESTful API for user authentication, post creation, and social media interactions such as likes, comments, and bookmarks.
- Designed and implemented a relational MySQL database schema to manage users, posts, and engagement data efficiently.
- Validated the complete API surface using Postman, covering authentication flows, edge cases, and CRUD operation correctness across all endpoints.

Khloris – Ecommerce system with Inventory Management | [Link](#)

Technologies Used: PHP, MySQL, HTML, CSS

- Developed the admin-side features for managing inventory and store operations for a flower shop.

- Implemented core e-commerce functionality including session-based user authentication, cart management, and end-to-end order processing with persistent storage in MySQL.

EDUCATION

College of Mary Immaculate

September 2021 – March 2026

Bachelor of Science in Computer Science

CERTIFICATIONS

- **Harnessing the Power of A.I for Progress and Development**

February 2025

Attended a seminar focused on leveraging artificial intelligence for innovation, growth, and strategic development.

- **Claude Code in Action**

April 2026
